

# The CARON Wire Safeguard Group

MAXIMUM PROTECTION • MINIMUM DOWNTIME

## IT WORKS!

Shown with the **intermittent** Wire Safeguard Group pattern.

Competitive weld-on guards require more downtime and man hours at replacement.

Wire wrapping problems have finally met their match. Introducing the Caron Wire Safeguard Group (WSG), an economical, long-lasting protection system that all but eliminates landfill wire wrap issues. Built with legendary Caron value and quality, the Caron Wire Safeguard Group uses hardened alloy steel tips – **Caron Contour Pin-On® Teeth** – to outlast competitive fabricated steel rings. Using this system, the WSG can be replaced as part of the normal tip maintenance schedule, resulting in less man-hours and less downtime than weld-on ring guards. Add a 10,000 hour wire guard wear guarantee and the Caron Wheel with WSG is hard to beat. Save both time and money: contact Caron for complete information.

The Caron Wire Safeguard Group with patented Pin-On technology stands out from the competition and fights wire build-up effectively and economically. Shown with the **continuous** Wire Safeguard Group pattern.
